Disabling UC-One pop-ups on Desktop

The following Feature Access Codes (Star Codes) when input via the UC-One app for Desktop's keypad:

*12   -   Location Control Activation

*13   -   Location Control Deactivation

If the end user dials *13 from the UC-One dial pad, calls will no longer be presented to their PC. They can still use UC-One to make outbound calls. But inbound calls will not ring on their UC-One desktop softphone.

*13 disables UC-One call 'pop-ups' during the ring cycle. If a call is answered on the handset UC-One will pop the active call window.

*12 will re-enable the calls being presented to the UC-One Desktop registration.
