

Veeam - Backup as a Service - BaaS

Veeam - VDC Cloud Backup is a backup service provided by Evolve IP to meet the needs of our Virtual DataCenter clients. All backups are performed at the image level within the client's availability zone (Evolve IP East/ Evolve IP West) and managed by the client via the Veeam BaaS Self-Service Portal. The client is responsible for managing their production datastore space as well as their backup repository space. Clients may purchase additional backup disk space as needed.
