Features

Tenfold integration offers features for both inbound and outbound unified communications.

- Click 2 Call from any phone number within the CRM and also any other phone numbers displayed on webpages in the Chrome browser
- Incoming screen-pop with caller ID lookup in the CRM
- *Automated Call logging* in the CRM with time, date, duration, and call direction info
- Call log window to capture subject of call, notes, and populate call tags – saving from call log window writes into SF
- Easy pop-up button for navigation over to various modules in the CRM: Leads, Accounts, Contacts, etc. These vary slightly based on each different CRM.
- Display activity history from the CRM in the screen pop, such as: Calls, Emails, and Future Tasks
- Ability to add new number to an existing contact from call log window when caller ID number is unrecognized
- Easy task creation from the screen pop using natural language, such as: 'follow up next week'
- Send call wrap up emails using the tagging feature @person.

- Tenfold analytics dashboard
- Create new opportunities, cases, and tickets
- Relate calls to opportunities, cases, and tickets
- Call dispositions
- Email template integration
- Gamification of call activity

Benefits

The benefits of the CRM Integration target the most widely deployed cloud-based CRM applications (Salesforce, MS Dynamics, Zendesk, etc).

- Save end-user time without having to look-up contact and account information or waste time navigating to the CRM manually
- Deployment as a browser add-in from the Chrome App store for fast and easy deployment
- No hardware or applications to host on a virtual server
- Enhancements & Updates to the application can be pushed remotely with no customer admin involvement via Chrome browser web app deployment
