Clearlogin - Web Portals

In This Article

- Overview
- The Admin Portal
- The User Portal & Dashboard

Overview

There are two web portals in Clearlogin. The **Clearlogin Admin Portal** allows you to control and configure your Clearlogin tenant including your identity sources, user profiles, and application connectors.

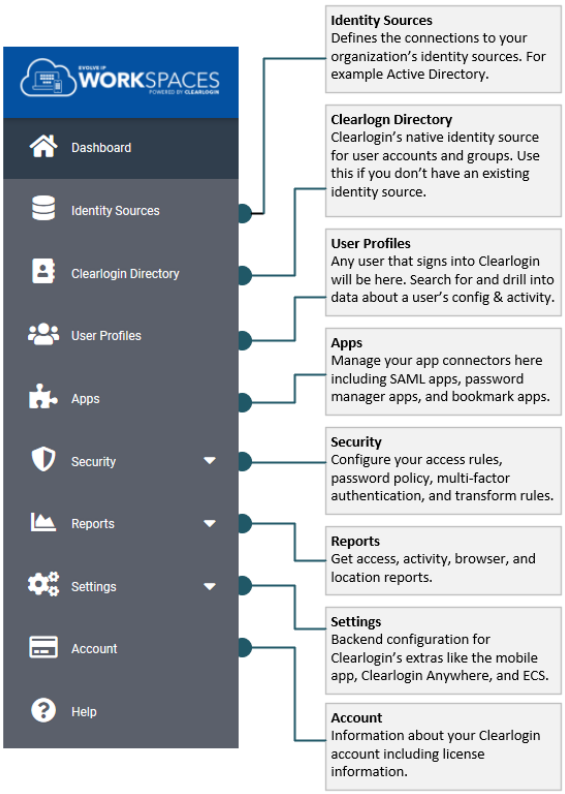
The **Clearlogin User Portal** contains the user's app dashboard, which allows them to access your organization's applications. Each Clearlogin tenant uses a unique URL for the user portal by defining a subdomain of the clearlogin.com top-level domain. For example: https://companyname.clearlgoin.com

You can modify your subdomain in the admin portal, but it has to be unique in the Clearlogin multi-tenant environment. Sign into the admin portal and navigate to: **Settings** > **Advanced**

> **IMPORTANT**
>
> Changing your subdomain affects the URL your users use to log in, and any URLs you have configured in third party applications for SAML or JWT federation.

The Admin Portal

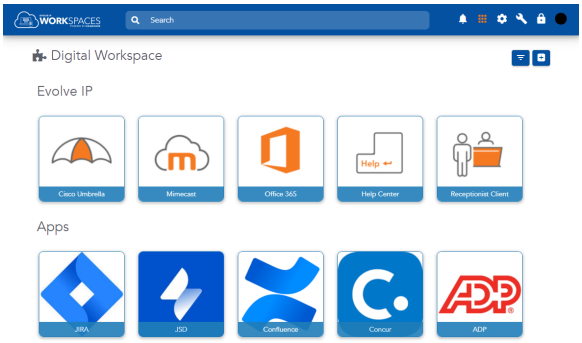
The **Clearlogin Admin Portal** is where you configure your Clearlogin tenant. This includes identity sources, user profiles, application connectors, security settings, and reporting. You can also customize the branding of the user portal with your company's colors, logos, and policies.



The User Portal & Dashboard

The User Portal contains the user's app dashboard, which gives your user's a central location to access the company's applications. Users can customize their dashboard in the following ways:

- Change the size of their app tiles
- Show/Hide individual app tiles

- Auto-launch one or more apps after initial login
- For each password app tile, set the user/pwd credentials for the app


> **NOTE**
>
> Refer to the **Portal & Dashboard Tour** article in the end-user guide for more information.
